

The Ergolet SOLE 2004

The Ergolet SOLE 2004 – another breakthrough for the working environment in hospitals, nursing homes and other institutions where heavy lifting must be eliminated.

The long lifting arm combined with lightly curved legs ensure ample room for the client and improved working space for the carer. The unique spreader bar combined with the high weight capacity of 175kg gives optimal confidence and safety during client transfer.

The low friction and virtually maintenance free wheels ensure easy manoeuvrability of the lifter

The design concept and high quality increases well being and security for client and carer

Functions

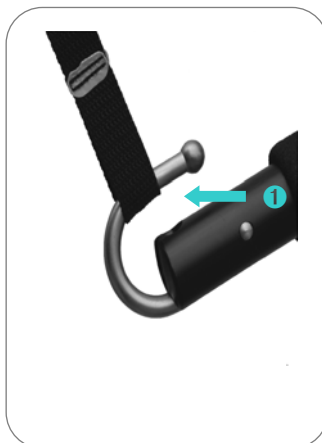

- Charging through the ergonomic hand control and the wall/table charger.
 - Electric leg spreading as standard
 - Designed for use with 2 and 4 point spreader bars
 - Spline function and mechanical emergency lowering
- New spreader bar (Pat. Pending)

Sling straps are placed over the hooks in the open position.

The straps are pulled downwards so that the hooks lock in place.

The hook design ensures that the weight of the client will always act to close the hooks in a locked position.

Releasing the sling simply requires an upward pull on the straps to open the hooks again

Technical data

Width, base (min/max):	65/1000cm
Length of legs.	101cm
Total weight:	46,5kg
Max. lifting capacity:	175kg
Lifting interval:	31-185cm
Heaviest part:	approx. 26kg
Material:	Powder coated steel

93/42/EØF CLASS I
EN ISO 10535
EN 60601-1-2
